A SIMPLE SOLUTION TO ADDRESS CARD CLONING

By Shep Sheppard
Key Accounts Sales Manager

Proximity 125-kHz technology has a huge install base around the world. Literally millions of proximity readers, cards and tags are installed and operating in the field today, and that investment continues to grow. So, how can access control systems based on 125-kHz proximity be made more secure in an efficient and cost-effective manner? One answer lies at the tip of your finger.

On the Case

The Farpointe team having a little fun while in Orlando, Florida.

Planning an access control application? Contact the sleuths at Farpointe, and they will investigate the best RFID solution. From proximity and contactless smart, to long-range and mobile, Farpointe is always on the case.

Farpointe Data®

The Prox Reader Shootout
By Brian Rhodes
As seen on **IPVM.com**

Over a third of integrators call 125 kHz 'favorite', and tens of thousands of systems use them every day. So we picked readers from Allegion, HID, and Honeywell and others to see how they stacked up. We also tested the cheapest options we could find, just to see how much price plays a role in better performance.
