WHY MOBILE ACCESS IS MORE SECURE THAN CARD SYSTEMS

By Scott Lindley
 General Manager, Farpointe Data
 As seen on [Brilliance Security Magazine](#)

The ability to use mobile phones as access credentials is one of the biggest trends in a market that historically has been slow in adopting new technology. As a matter of fact, research analyst Gartner has predicted that, by 2020, one in five organizations will be using smartphones instead of traditional physical access cards to access offices and other premises.

Spotted on the Street

CONEKT® CSR-35 Mobile-Ready Readers support both mobile access credentials and traditional physical credentials, allowing access control system manufacturers and integrators to offer customers a comprehensive cloud-based mobile identification solution.

This CSR-35 reader, spotted installed in a Seattle apartment building, is tied to an access control system from our friends at Open Options and allows residents to use their smartphones as the access credential.

Product Spotlight: CONEKT® CMC-2 Mobile Credentials

With a convenient cloud-based delivery system and no physical credentials to inventory, Conekt mobile credentials are quicker and easier to order, distribute, and maintain.

Benefits:

- Supports both industry-standard and custom access control formats
- Delivered in the exact ID sequence ordered—no under- or over-runs
- Options to private label—logo, graphics, text and more
- Secured by AES encryption—proven data protection
- Operates on Apple® iPhone® and Google® Android™-based smartphones
