and Protect Access Control Readers & Cards from Hackers

Protecting your organization(s) from hackers is imperative. The threats have grown to include sophisticated government backed entities and teenage mischief makers. Hackers look for the easiest path in, leveraging many different physical assets, including those within the enterprise security system itself.

Farpointe has put together this guide to help businesses, and the access control integrators that serve them, defend against hacking threats.

Perimeter Security Becomes a Main Focus

Access control technology and integration is being pushed farther from the building these days. What do integrators need to know to avoid pitfalls and capitalize on this new opportunity?

Senior Editor, SDM Magazine

*As seen in **SDM** Magazine*

Donald Trump isn't the only one with borders on his mind. World events in recent years have demonstrated that the need for physical security doesn't start at the front door of the office. With increasing incidents of vehicle attacks and terrorism both inside and outside buildings, more and more companies are realizing that stopping potential bad actors farther from the door is not only desirable—it is necessary.

Global Access

On a recent business trip to Australia, Farpointe's Key Accounts Sales Manager, Shep Sheppard, came across this Farpointe proximity reader, not far from the iconic Sydney Opera House.

The unit pictured (circled in red) is a **P-300 125-kHz proximity reader**, installed below an intercom system at the front entrance of an office building.

Spotlight: Mounting Guides Now Available

Farpointe has added mounting guides—a new resource for installing technicians—to its website. Each guide provides the necessary information to assist in mounting a reader to a flat surface. Many of the guides are shown actual size, which can be printed at 100% and used for marking drill holes. Guides are available for both letter-size and A4-size paper.
